

B05010

RATIO OF INCOME TO POVERTY LEVEL IN THE PAST 12 MONTHS BY NATIVITY OF CHILDREN UNDER 18 YEARS IN FAMILIES AND SUBFAMILIES BY LIVING ARRANGEMENTS AND NATIVITY OF PARENTS
Universe: Own children under 18 years in families and subfamilies for whom poverty status is determined

2014 American Community Survey 1-Year Estimates

Supporting documentation on code lists, subject definitions, data accuracy, and statistical testing can be found on the American Community Survey website in the Data and Documentation section.

Sample size and data quality measures (including coverage rates, allocation rates, and response rates) can be found on the American Community Survey website in the Methodology section.

Although the American Community Survey (ACS) produces population, demographic and housing unit estimates, it is the Census Bureau's Population Estimates Program that produces and disseminates the official estimates of the population for the nation, states, counties, cities and towns and estimates of housing units for states and counties.

	Westchester County, New York	
	Estimate	Margin of Error
Total:	215,990	+/-1,141
Under 1.00:	26,649	+/-3,990
Living with two parents:	9,921	+/-2,721
Both parents native	2,965	+/-1,275
Both parents foreign born	5,898	+/-2,245
One native and one foreign-born parent	1,058	+/-978
Living with one parent:	16,728	+/-3,277
Native parent	8,648	+/-2,579
Foreign-born parent	8,080	+/-2,678
1.00 to 1.99:	29,671	+/-4,073
Living with two parents:	15,019	+/-2,966
Both parents native	2,927	+/-1,350
Both parents foreign born	10,597	+/-2,489
One native and one foreign-born parent	1,495	+/-1,057
Living with one parent:	14,652	+/-2,727
Native parent	6,878	+/-2,358
Foreign-born parent	7,774	+/-1,933
2.0 and over:	159,670	+/-3,651
Living with two parents:	132,910	+/-4,534
Both parents native	82,465	+/-4,210
Both parents foreign born	28,200	+/-3,482
One native and one foreign-born parent	22,245	+/-3,068
Living with one parent:	26,760	+/-4,014
Native parent	17,481	+/-3,082
Foreign-born parent	9,279	+/-2,378

Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent margin of error. The margin of error can be interpreted roughly as providing a 90 percent probability that the interval defined by the estimate minus the margin of error and the estimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error (for a discussion of nonsampling variability, see Accuracy of the Data). The effect of nonsampling error is not represented in these tables.

While the 2014 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

Estimates of urban and rural population, housing units, and characteristics reflect boundaries of urban areas defined based on Census 2010 data. As a result, data for urban and rural areas from the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:

1. An '***' entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical test is not appropriate.
2. An '-' entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute an estimate, or a ratio of medians cannot be calculated because one or both of the median estimates falls in the lowest interval or upper interval of an open-ended distribution.
3. An '-' following a median estimate means the median falls in the lowest interval of an open-ended distribution.
4. An '+' following a median estimate means the median falls in the upper interval of an open-ended distribution.
5. An '****' entry in the margin of error column indicates that the median falls in the lowest interval or upper interval of an open-ended distribution. A statistical test is not appropriate.
6. An '*****' entry in the margin of error column indicates that the estimate is controlled. A statistical test for sampling variability is not appropriate.
7. An 'N' entry in the estimate and margin of error columns indicates that data for this geographic area cannot be displayed because the number of sample cases is too small.
8. An '(X)' means that the estimate is not applicable or not available.
